This session presents the 16-hour online learning session on Invent an App which was designed to equip and empower selected ICT-track female students of a secondary school, with the necessary knowledge and skills in developing their own applications using block-based coding. The presentation aims to showcase how the learning session was designed and how participants went through the step-by-step process of building their own apps. It will also discuss how the learning sessions were conducted in a distance learning mode and presents the different learning modalities and online tools used in conducting the learning sessions remotely during the pandemic.
